	ernationalization and localization — These are opportunities to improve the interpretation of your content by users in erent locales.	
A	<html> element does not have a [lang] attribute</html>	^
	If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might no announce the page's text correctly. <u>Learn more</u> .	ot
	Failing Elements	
	html	
mo	re in our guide on <u>conducting an accessibility review</u> . The page has a logical tab order	^
	Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. <u>Learn more</u> .	
	Interactive controls are keyboard focusable	^
	Custom interactive controls are keyboard focusable and display a focus indicator. <u>Learn more</u> .	
	Interactive elements indicate their purpose and state	^
	Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. <u>Learn more</u> .	
	The user's focus is directed to new content added to the page	^
	If new content, such as a dialog, is added to the page, the user's focus is directed to it. <u>Learn more</u> .	
	User focus is not accidentally trapped in a region	^
	A user can tab into and out of any control or region without accidentally trapping their focus. Learn more.	
	Custom controls have associated labels	^
	Custom interactive controls have associated labels, provided by aria-label or aria-labelledby. <u>Learn more</u> .	
	Custom controls have ARIA roles	^

Custom interactive controls have appropriate ARIA roles. <u>Learn more</u> .	
Visual order on the page follows DOM order	^
DOM order matches the visual order, improving navigation for assistive technology. <u>Learn more</u> .	
Offscreen content is hidden from assistive technology	^
Offscreen content is hidden with display: none or aria-hidden=true. <u>Learn more</u> .	
Headings don't skip levels	^
Headings are used to create an outline for the page and heading levels are not skipped. <u>Learn more</u> .	
HTML5 landmark elements are used to improve navigation	^
Landmark elements (<main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive tech Learn more.</nav></main>	ınology.
Passed audits (4)	^
The page contains a heading, skip link, or landmark region	/
Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently. <u>Learn more</u> .	
Document has a <title> element</td><td>,</td></tr><tr><td>The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine page is relevant to their search. <u>Learn more</u>.</td><td>if a</td></tr><tr><td>Links have a discernible name</td><td>/</td></tr><tr><td>Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. <u>Learn more</u>.</td><td></td></tr><tr><td>No element has a [tabindex] value greater than 0</td><td>/</td></tr><tr><td>A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies. <u>Learn more</u>.</td><td></td></tr><tr><td>Not applicable (26)</td><td>^</td></tr><tr><td>[accesskey] values are unique</td><td>/</td></tr><tr><td>Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. Lear</td><td><u>n more</u>.</td></tr><tr><td>[aria-*] attributes match their roles</td><td>/</td></tr><tr><td>Each ARIA `role` supports a specific subset of `aria-*` attributes. Ensuring proper list structure aids screen reader output. <u>Learn more</u>.</td><td></td></tr><tr><td>List items () are contained within or parent elements</td><td>^</td></tr><tr><td></td><td></td></tr></tbody></table></script></dd></dt></dl></pre>	

28/12/2019

Screen readers require list items (``) to be contained within a parent `` or `` to be announced properly. <u>Learn more</u>.

The document does not use <meta http-equiv="refresh">

Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. This may create a frustrating or confusing experience. <u>Learn more</u>.

[user-scalable="no"] is not used in the <meta name="viewport"> element and the [maximum-scale] attribute is not less than 5.

Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. <u>Learn more</u>.

<object> elements have [alt] text

Screen readers cannot translate non-text content. Adding alt text to `<object>` elements helps screen readers convey meaning to users. <u>Learn more</u>.

Cells in a element that use the [headers] attribute only refer to other cells of that same table.

Screen readers have features to make navigating tables easier. Ensuring `` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. <u>Learn more</u>.

> elements and elements with [role="columnheader"/"rowheader"] have data cells they describe.

Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users. <u>Learn more</u>.

[lang] attributes have a valid value

Specifying a valid <u>BCP 47 language</u> on elements helps ensure that text is pronounced correctly by a screen reader. <u>Learn more</u>.

<video> elements contain a <track> element with [kind="captions"]

When a video provides a caption it is easier for deaf and hearing impaired users to access its information. Learn more.

<video> elements contain a <track> element with [kind="description"]

Audio descriptions provide relevant information for videos that dialogue cannot, such as facial expressions and scenes. <u>Learn more</u>.

Best Practices

▲ Does not use HTTPS — 7 insecure requests found

All sites should be protected with HTTPS, even ones that don't handle sensitive data. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. <u>Learn more</u>.

Avoids Application Cache		^
Application Cache is deprecated. <u>Learn more</u> .		
Uses HTTP/2 for its own resources		^
HTTP/2 offers many benefits over HTTP/1.1, ir	ncluding binary headers, multiplexing, and server push. <u>Learn more</u> .	
Uses passive listeners to improve scrolling per	formance	^
Consider marking your touch and wheel event	listeners as `passive` to improve your page's scroll performance. Learn mor	<u>e</u> .
Avoids document.write()		^
For users on slow connections, external scripts seconds. <u>Learn more</u> .	s dynamically injected via `document.write()` can delay page load by tens of	
Links to cross-origin destinations are safe		^
Add `rel="noopener"` or `rel="noreferrer"` to ar Learn more.	ny external links to improve performance and prevent security vulnerabilities.	
Avoids requesting the geolocation permission	on page load	^
Users are mistrustful of or confused by sites th action instead. <u>Learn more</u> .	at request their location without context. Consider tying the request to a use	r
Page has the HTML doctype		^
Specifying a doctype prevents the browser from	m switching to quirks-mode. Read more on the MDN Web Docs page	
Avoids front-end JavaScript libraries with know	n security vulnerabilities	^
Some third-party scripts may contain known se <u>Learn more</u> .	ecurity vulnerabilities that are easily identified and exploited by attackers.	
Detected JavaScript libraries		^
All front-end JavaScript libraries detected on the	ne page.	
Avoids requesting the notification permission of	n page load	^
Users are mistrustful of or confused by sites th user gestures instead. <u>Learn more</u> .	at request to send notifications without context. Consider tying the request t	D
Avoids deprecated APIs		^
Deprecated APIs will eventually be removed from	om the browser. <u>Learn more</u> .	
Allows users to paste into password fields		^

Preventing password pasting undermines good security policy. Learn more.

Displays images with correct aspect ratio

Image display dimensions should match natural aspect ratio. Learn more.

These checks ensure that your page is optimized for search engine results ranking. There are additional factors Lighthouse does not check that may affect your search ranking. <u>Learn more</u>.

Mobile Friendly — Make sure your pages are mobile friendly so users don't have to pinch or zoom in order to read the content pages. <u>Learn more</u>.

▲ Does not have a <meta name="viewport"> tag with width or initial-scale No viewport meta tag found

Add a viewport meta tag to optimize your app for mobile screens. Learn more.

Document doesn't use legible font sizes

Text is illegible because there's no viewport meta tag optimized for mobile screens.

Font sizes less than 12px are too small to be legible and require mobile visitors to "pinch to zoom" in order to read. Strive to have >60% of page text $\ge 12px$. Learn more.

Tap targets are not sized appropriately

Tap targets are too small because there's no viewport meta tag optimized for mobile screens

Interactive elements like buttons and links should be large enough (48x48px), and have enough space around them, to be easy enough to tap without overlapping onto other elements. Learn more.

Content Best Practices — Format your HTML in a way that enables crawlers to better understand your app's content.

▲ Image elements do not have [alt] attributes

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. <u>Learn more</u>.
